## Dentistry - Find a Dentist - Dental Care

What did your parents tell you about going to the dentist? Did they talk about how your dentist could help you with all of your dental care needs such as your teeth, gums and even your smile? Instead, they probably emphasized the negative: "It won't hurt much," or "Your toothache will be gone."

For most of us, the stories we heard about visiting a dentist described how the person in the white jacket helped relieve tooth pain. We didn't hear about the dentist or dentistry team creating opportunities for good health and an attractive bright smile.

At [1st Dentist .com](http://1stDentist.com) you'll find the latest dental research why it is important to visit your dentist regularly.

---

## Tooth Whitening - Tooth Bleaching - Tooth Whitener

How would you feel if your smile was a bit brighter than it is right now? Whiter teeth not only look sensational, they build the kind of inner confidence that really gives a smile its electricity.

There are also choices among tooth whitening systems. New gels and solutions are accelerated by light; laser technology is new and a very effective dental care solution. Tooth whitening systems can whiten teeth fast in your dentist's office, or over time at home, at your convenience.

Visit [1st Tooth Whitening .com](http://1stToothWhitening.com) to learn more about the various tooth whitening options that are currently available to you. Find a dentist today!

---

## Wisdom Teeth - Oral Surgery - Oral Surgeon - Wisdom Tooth Removal

Wisdom teeth, those third molars at the very back of our mouths, are so named because they generally erupt during late adolescence and early adulthood. When properly positioned they can be a valuable asset to us. When the jaw is not large enough to accommodate these teeth, they can cause dental care problems, such as infection, requiring wisdom tooth removal.

The bottom line is that wisdom teeth most often don't fit well in our mouths and they can cause other teeth to move or lead to gum disease or bone problems. An oral surgeon or your dentist can provide guidance whether you're a candidate for wisdom teeth removal (extraction).

Visit [1st Wisdom Teeth .com](http://1stWisdomTeeth.com) to find a dentist to make an evaluation and suggest the best dental care options for you.

---

## Root Canal - Dental Endodontists - Endodontics

Don't panic. When your dentist or dental care team says you need a root canal, that's actually good news. It means they can save your tooth, instead of extracting it.

The procedure is not painful, as you may have heard. They numb the tooth so you won't

feel any pain, and there is little discomfort afterwards. Extracting the tooth would be less healthy and more expensive.

Why do people need a root canal? When the nerve of the tooth is irreversibly damaged by decay or an injury, pulp tissue can become infected, often causing pain, swelling and sensitivity to hot or cold.

---

### **Pediatric Dentist - Baby Teeth - Pediatric Dentistry - Child Dentist**

A baby's first tooth is another milestone in the growth of a child. Parents love to celebrate the tiny, yet momentous steps that pave a child's healthy development.

Babies are born with their primary teeth formed underneath the gums, but they don't start appearing until many months later, usually between six to seven months after birth; however, there is considerable variation in the timing. By the time children are three years old, they usually have a full set of 20 primary teeth.

Find out more information and research about your child's teeth by visiting [1st Pediatric Dentist .com](http://1st Pediatric Dentist .com).

---

### **Gum Disease - Gingivitis - Periodontal Disease**

According to information from the American Dental Association, three out of four Americans over age 35 have some form of periodontal disease, the major cause of tooth loss and bad breath in adults. Gingivitis is the mildest form of periodontal disease that, if left untreated, can progress to the loss of bone and tissues that support the tooth - periodontitis.

Everyone should be routinely screened for periodontal disease. All dentists and dental care teams are qualified in detecting and treating the early stages of periodontal disease, but if an individual suspects that they are at risk, or they know they have periodontal disease, they may want to see a periodontist who has extensive advanced training in the diagnosis and treatment of periodontal condition. **Click here to find a great periodontist near you.**

### **TMJ - TMJ Dentist - TMJ Symptoms - TMD - TMJ Treatment - TMJ Syndrome**

TMJ Dysfunction is a living nightmare for an estimated 50 million Americans who suffer from this distress. And the fact that many dentists and physicians fail to diagnose this disorder means that people are suffering needlessly and spending money on dental care visits and drugs that give them no relief. But there is hope when TMJ is diagnosed correctly.

If you or someone you love suffer from the symptoms of TMJ, visit [1st TMJ Dentist .com](http://1st TMJ Dentist .com) for information you need to find a dentist that will be able to help you. It may end years of suffering and pain.

### **Dentures - False Teeth - Affordable Dentures - Repair**

Dentures make life easier every day. While you may miss your natural teeth, dentures make it possible for you to eat well, improve your appearance, fill gaps where natural teeth are missing and support your facial muscles so you maintain your appearance.

Dentures require special dental care, however, and so does the rest of your mouth. Daily cleaning and regular dental care visits are just as important now that you are a denture wearer as they were before you got your dentures.

Visit [1st Dentures .com](http://1st Dentures .com) to learn about having dentures as well as to find a dentist to assist you with your dentures and other dental care needs.

## Best Dental Insurance - Dental Plan - Individual Dental Insurance - Dental Coverage

Everyone seems to want dental insurance, but many dental patients don't fully understand what it can do for them. The following information on 1st Dental Insurance is intended to provide an overview of dental care insurance, the variations that exist and how to effectively use your benefits.

Dental insurance is most commonly found as an employee benefit that helps the member and his or her family to afford proper dental care services. While dental insurance plans for individuals are sold, they are often quite expensive due to the elective nature of most dental services. Employers and their human resource managers purchase most dental insurance plans for the company's employees.

---

## Dental Financing - Dental Loans - Dental Credit Cards

The new dentistry brings together a unique complement of skills, knowledge, and capabilities with one primary focus: ensuring your dental health care. Working as a team, your dentist and the dental care team he or she has assembled wants to recruit you to join them in making sure this focus is maintained. The dental care team has two major parts that you may hear referenced during your visits: the "back" and the "front." These terms refer to two very specific functions of your dental care team. The front office handles all the administration, scheduling, and dental financing, and the back office provides the treatment.

In order to receive the dental care you need sometimes you are going to need dental financing and choosing a dental expense plan can be a confusing experience. Although there is no one "best" dental payment plan for financing health care, there are some plans that will be better than others for you and your family's dental payment plan needs.

We will try to guide you in simple terms. However, rather than just giving you answers, the best thing [1st Dental Financing .com](http://1stDentalFinancing.com) can do is to make sure you are equipped with the right questions for the dentists.

## Dental Hygiene - Dental Hygienist - Dental Cleaning

A good toothbrush is an essential tool for daily dental care and good dental hygiene. Not long ago, toothbrushes were all rather standard in design. Now they are available in a dazzling array of colors, sizes and styles, angled heads, tufted bristles, powered by hand, electricity, or sonic waves.

Flossing before or after brushing should be a part of your home dental care program. It doesn't matter which floss you use. How many times have you heard your dentist and dental hygienist tell you to floss? You nod your head and, maybe, you try flossing for a while. Then old habits take over. Well, it bears repeating: flossing is one of the best things you can do to keep your teeth and gums healthy.

Visit [1st Dental Hygiene .com](http://1stDentalHygiene.com) to learn the latest information and research on how to achieve outstanding dental hygiene.
